Following is the sheet showing the results of the pump survey. A hard copy of this has been sent to Roger Ruth for distribution to the membership.

Last year, there was controversy about the aerial survey. I expanded the survey to include different heights of units as well as different types. The sizes which I selected were too narrow and, as a result, it singled out some manufacturers.

I was hoping to get the form revised at National Foam since it is on a computer there. I still have not had any luck getting help from them. I have now created the form on my computer and will get it mailed out this week.

I will send you a more detailed report within a few days.

Ned
